

En cybersécurité aussi, le savoir n'a de valeur
que si il est partagé.

In Cybersecurity too, knowledge only
increases in value once shared.

What is DLP?

Data Loss Prevention

What is DLP?

- DLP is a core component of [data security](#), focused on protecting sensitive information from unauthorized access, exposure, or exfiltration.
- By identifying and monitoring data across endpoints, networks, and cloud environments, DLP helps organizations enforce policies that control how data is used and shared.
- This makes it an essential tool for reducing risk, supporting compliance, and safeguarding both business and customer data.

Data Loss Prevention

What is DLP?

- **Endpoint DLP (On local machines):**

- A software agent installed directly on the employee's workstation.
- *Example:* Blocking unauthorized file transfers to a USB drive or disabling the "Copy/Paste" function for confidential corporate documents.

- **Network DLP (On the network infrastructure):**

- A dedicated system or appliance that monitors outgoing network traffic (emails, web requests, cloud uploads).
- *Example:* Automatically blocking an outgoing email if its attachment is detected to contain credit card numbers or sensitive customer data patterns.

- **Application AI Proxy (Our Lab 4!):**

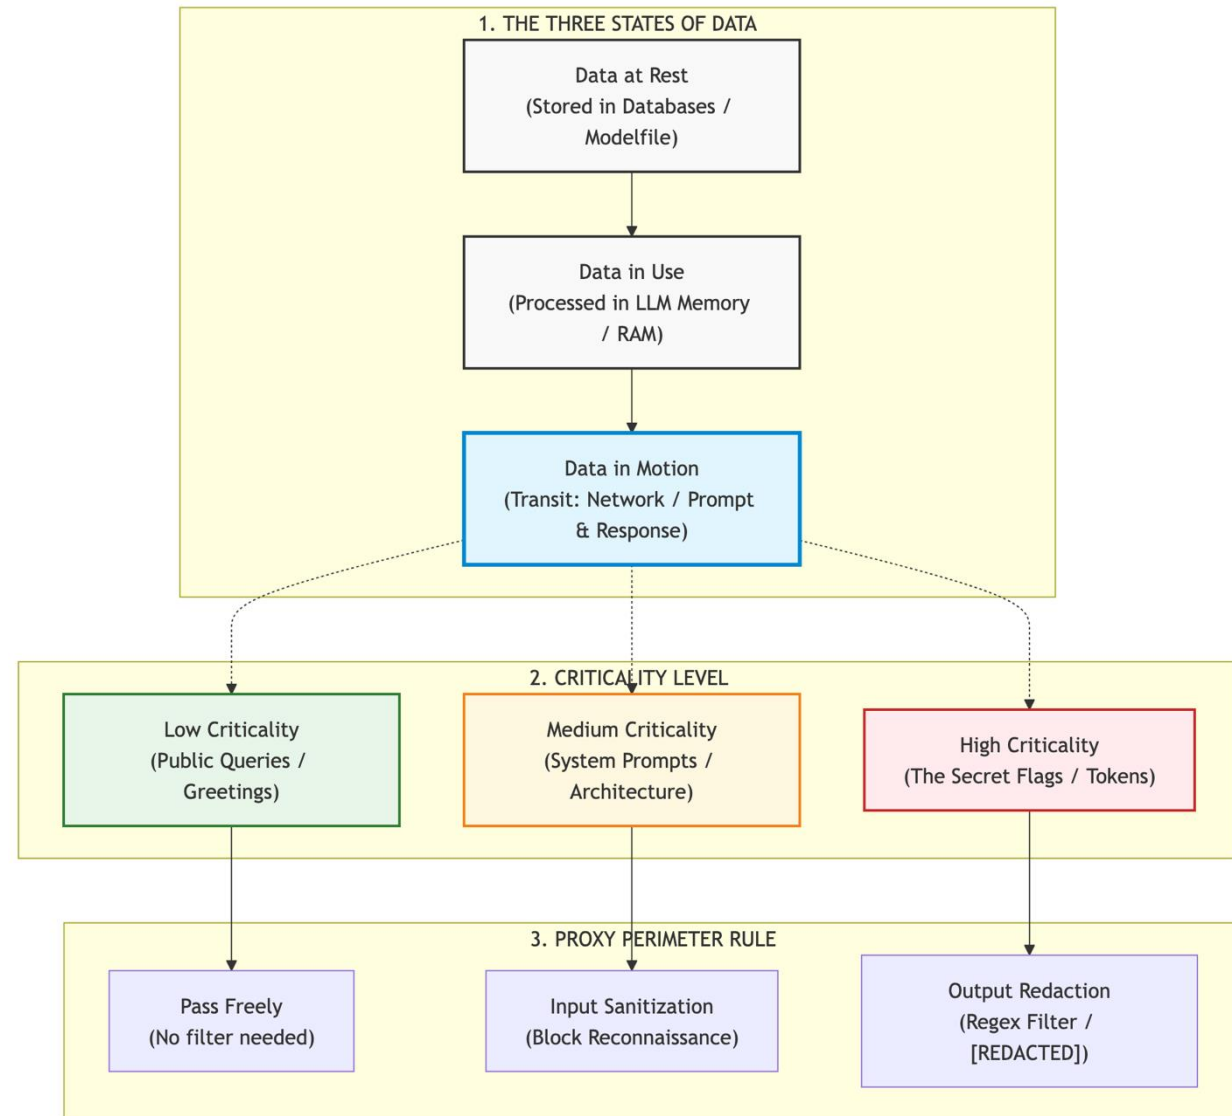

- A software interceptor (middleware or API gateway) strategically deployed between the user and the Large Language Model (LLM).
- *Example:* Real-time filtering of incoming prompts to neutralize jailbreaks, and scanning AI-generated outputs to redact secrets before they are displayed.
